

ENGR 3430: Miniproject 2

due September 29, 2026

In this miniproject, you will get some experience in the assembly of surface-mount printed circuit boards using a mylar stencil, solder paste, and a reflow hotplate. You will be assembling the reference PCB design from Miniproject 1 using the provided equipment, the attached schematic, the provided parts sheets, and the interactive HTML bill of materials (BoM), which you can find in the Files section of the course Canvas site.

Deliverables. By the start of class on September 29 you must complete the assembly of a functional board. You will need to submit a PDF file containing a link to a video demonstration of your board via the course Canvas site.
